Summary

Frontend-focused engineer with 6 years building web applications. Deep on React and the browser; lighter on backend, though I've shipped Node services when a project needed them. Strong on product polish and design collaboration.

Experience

Senior Frontend Engineer - Northwind Studio (2021 - present)

Lead the frontend for a design-collaboration product. React, TypeScript, a large component library I helped architect. Obsessive about performance and accessibility. Work daily with designers and own the whole client experience.

Built a few Node/Express endpoints for a real-time feature and set up the WebSocket layer, but the heavy backend work was owned by another team.

Frontend Engineer - Lumen Media (2018 - 2021)

Built marketing sites and an internal CMS front end. React and some Vue. First exposure to talking to APIs and thinking about state management at scale.

Education

B.S. Human-Computer Interaction, University of Washington (2018)

Skills

JavaScript/TypeScript (expert), React, Vue, CSS, web performance, accessibility, Node/Express (working knowledge), REST APIs (consuming more than building), Git. Limited: databases, backend system design, production operations.
